

HIGHER EDUCATION TRAINEESHIPS HAVE ARRIVED!

SA Skills Commission approves Australia's **FIRST** tertiary traineeship.

RESA's application to establish a new South Australian tertiary level traineeship pathway to support work based career entry and progression into Associate Engineer roles has been approved.

ASSOCIATE ENGINEER

CIVIL – ELECTRICAL - MECHANICAL – GEOLOGY – MINING

This outcome is the result of effective collaboration between Resources and Engineering Skills Alliance (RESA), Uni Hub – Spencer Gulf, CQU, the Government of South Australia and industry.

South Australia's Skills Commission has approved the declaration of the vocation of Associate Engineer, Australia's first declared tertiary traineeship!

The Associate Engineer vocation has been approved* by the South Australian Skills Commission and was gazetted by the South Australian government on 23rd December, in accordance with the SA Skills Act 2008.

This traineeship will fill a gap in the availability of pathways to support the workforce demands for upcoming projects and existing operations across the resources and infrastructure industry sectors.

The pathway opens opportunities for progression for traditional trades and technical personnel into related tertiary engineering roles, through Central Queensland University's Associate Degree in Engineering, with specialisation streams in Civil, Electrical, Mechanical, Geology or Mining Engineering. All with the support of Uni Hub – Spencer Gulf.

The traineeship is **NOW** available for new commencements.

RESA's successful application for the declaration of this vocation is the result of extensive collaboration with a broad range of stakeholders.

RESA has a lead role in the development and application of the national vocational education and training system for the resource and infrastructure industry sectors. We have welcomed this opportunity to collaborate with key stakeholders to, once again, provide a strategic application of the skills framework for the benefit of South Australians.
